Ingenuity for life

SINAMICS V20 Smart Access

From wireless commissioning to maintenance—
everything at your fingertips.

The SINAMICS V20 Smart Access is a web server module which mounts to your SINAMICS V20 quickly and easily.

In providing a Wi-fi based hot spot, the wireless connection transforms your mobile device or laptop into a virtual operator panel.

The simple embedded graphical user interface (GUI) makes it extremely easy-to-use the SINAMICS V20 drive in every phase of operation—from commissioning, operation, diagnostics and maintenance.

No separate app is necessary, nor is a written instruction manual needed—operation is very intuitive.

Highlights of SINAMICS V20 Smart Access

Provides easy and convenient access to the V20 even if it is located in difficult-to-access locations

User-friendly operation thanks to the embedded, intuitive web browser GUI and commissioning wizard

Full flexibility in working with both iOS and Android operating systems, along with commonly used HTML5 capable web browsers such as Chrome, Internet Explorer (IE) and Safari

Built-in multi-color LED provides quick and easy communication status

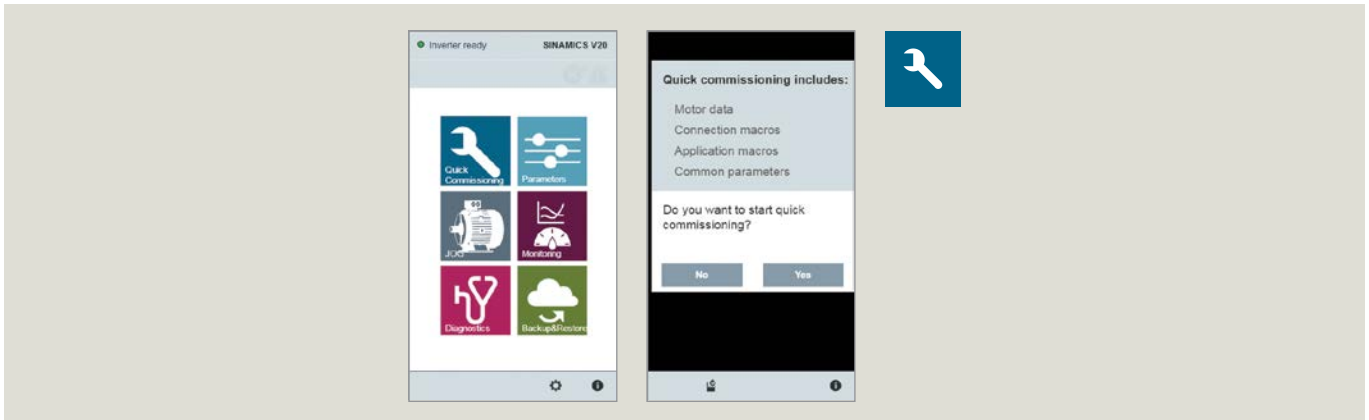

Many security features included to limit/restrict operator access and control functions

SINAMICS V20 Smart Access

Intuitive operation with simple menu-driven screens

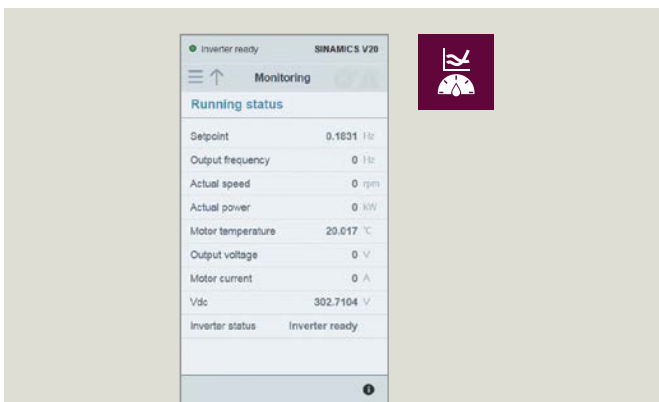

The SINAMICS V20 Smart Access web server module allows you to wirelessly connect your mobile device to your SINAMICS V20 drive—transforming it into a powerful tool for commissioning, diagnostics and operation with numerous functions.

It can be set-up in just a few steps and requires no installation or download of additional software. Your common web browser and operating system is enough to get started.

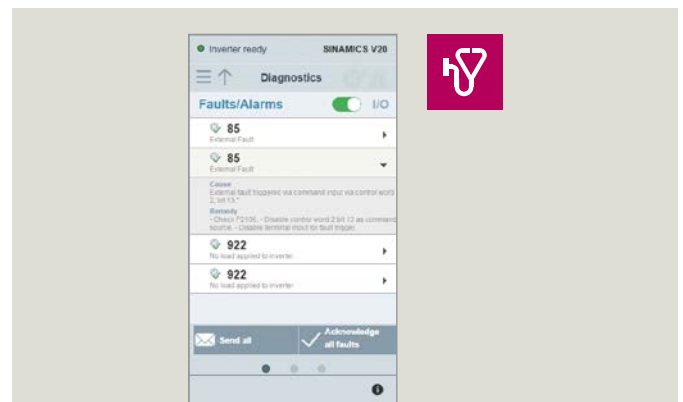

Quick set-up wizard for fast and easy commissioning

- Motor data can be entered and checked
- Connection macros for the digital inputs and digital outputs can be activated
- Application macros can be chosen and activated for pumps, fans, conveyors, etc.
- Common and frequently used parameters can be set (e.g. motor start, acceleration, deceleration, max./min. speed, etc.)

Monitor your drive's status

- Most significant drive data status can be viewed in real-time quickly and easily—e.g. speed, current, voltage, power, temperature, etc.

Drive servicing is easy

- An overview of alarms, faults and status is provided
- Fault codes can be directly transferred (via email) to your local service provider
- Status of all digital and analog inputs and outputs can be checked at a glance

Parameters can be quickly found and modified

- Quick search and filtering by functional parameter groups
- Frequently used parameters can be saved and easily changed in "my parameters"
- Parameters can quickly be set to default settings (user and factory defaults)
- Parameters can be saved to the drive or the Smart Access module

Motor operation and control can be tested

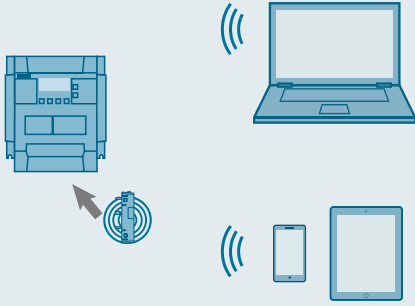

- Motor speed and direction can be changed
- Motor can be set to JOG mode or continuous operation with ON/OFF control
- Drive settings can be tested

Data can be easily backed up, restored and shared—Firmware updates are quickly downloaded

- Drive settings can be backed up in parameter files
- Drive data can be shared and sent to other devices for multiple use
- Parameter files can be read and changed offline with an external editor for optimization or quick support by your local service provider
- Drive settings can be restored out of the Smart Access module or received via web server or email transfer on your mobile device
- Any firmware updates are easily downloadable via the web server
